

NOVEL POLYNUCLEOTIDES AND POLYPEPTIDES ENCODED THEREBY

ABSTRACT

The present invention provides novel isolated NOVX polypeptides, as well as polynucleotides encoding them and antibodies that immunospecifically bind to NOVX or any derivative, variant, mutant, or fragment of NOVX polypeptides, polynucleotides or antibodies. The invention additionally provides methods in which the NOVX polypeptides, polynucleotides, and antibodies are used in detection and treatment of a broad range of pathological states, as well as other uses.
